Styling Sheets

User Interface style sheets are a language used and applied to GUIs. These are called on to program or mark up UI elements.

We are interested in styling sheets to understand how our mobile apps maintain GUI consistency. There is no need to use them as a stylesheet language, but rather a visual UI guide.

UI Style Sheet Example

Try to include:

- Font choice
- Font Sizes
- Colour swatches
- Buttons and UI elements
- Any other universal elements that you feel should be consistent

One sheet per team

H1 33pt

The quick brown fox jumps over the lazy dog

H2 24pt

The quick brown fox jumps over the lazy dog

H3-4 18pt

The quick brown fox jumps over the lazy dog

H5-6 12pt

The quick brown fox jumps over the lazy dog

BODY TEXT

The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog. The quick brown fox jumps over the lazy dog.

Color Palette

#FFFFFF

#00AEEF

#000000
